

Paper measuring gauge.

Step-by-step guide.

Our paper gauge is perfect for mini explorers who can stand on their own and the instructions below make measuring their wriggly little feet a doddle, so please read through them carefully.

As measuring is only a guide it's important to check the fit of the shoes once they arrive. Different styles and types of footwear can fit differently to one another so be sure to take a look at our fitting guides and videos at: startriteshoes.com/measure-at-home

1. Printing the gauge.

When printing double check that your printer is set to 100% or 'do not scale' to ensure an accurate result. Once printed use a ruler to check the millimetre markings match up.

2. Remove the width measure.

Cut along the dotted line to the left of the gauge to separate the width tape.

3. Place the chart on a hard floor.

You may find it helpful to place the heel line against a wall to make measuring easier.

4. Getting started.

Ask your child to pop one foot onto the paper gauge and make sure the back of their heel lines up with the thick line as shown. Double check they are standing normally, with their weight on both feet.

5. Measuring the length.

Jot down the millimetre measurement from their longest toe – no need to add any extra as we've already calculated growing room into all our shoes. Repeat for their other foot.

6. Using the width tape.

Wrap the cut-off width tape around the circumference of their foot at the widest point. The widest point is usually diagonally across from the big toe joint to the little toe joint. If you run your finger along either side of the foot, you'll feel a bump where the joints are.

7. Measuring the width.

Pull the tape so it's snug around the foot and take a note of the millimetre measurement. Repeat again for their other foot.

8. Getting your Start-Rite size.

Enter the largest length measurement and largest width measurement into our online size calculator at startriteshoes.com/size-calculator to find their size.
