

How to use the small measuring gauge.

Suitable for children with a UK shoe size Small 2 to Small 8½ – or for those up to around the age of 3.

1.

Firstly, ensure your child is wearing socks that fit well and are a similar thickness to those they will wear with the shoes.

Sit your child on an adult's knee, facing you, with their legs dangling, and bent at the knee.

2.

To measure the length, hold the measuring gauge in your left hand and guide the child's foot into the gauge ensuring the heel is against the heel rest.

Ensure the knee and ankle are at right angles, so the gauge is parallel with the floor.

Hold the heel firmly at the back of the gauge with the left hand. With your right hand gently hold down the child's toes so they're laying flat on the gauge. Check the socks are not squashing the toes.

Push the length slider forward so that it rests lightly against the longest toe.

3.

Take a note of the size shown by the line in the circle. This is the child's shoe size. The left circle shows the UK size, while the right circle shows the European size.

TIP: Remember to check the knee and ankle are at right angles and the gauge is still parallel to the floor.

4.

To measure the width of the foot, firstly check the foot is still in the correct position.

The width tape will automatically be in the correct position around the foot, simply pull the tape gently until it's resting on the foot.

Lift the tape with your right hand until it's parallel to the floor, then taking care not to twist the gauge make a note of the letter the blue arrow is pointing too. This is the width fitting.

TIP: Do not pull the tape tight on the foot as this will give an incorrect width measurement, it should just gently touch the foot.

5.

Repeat steps 1 to 5 and measure the other foot.

It's not uncommon for one foot to be bigger than the other. Your child's shoe size will be the size of the longest foot, and the width of the widest foot.

TIP: It's important to measure both feet, as it's not uncommon for your feet to be slightly different in size.

Once your shoes arrive, use our 'Check the Fit' guide to ensure the shoes you have chosen are a good fit.
