

LAKESIDE

SOLAR MINI POST LIGHTS (SET OF 2)

USER GUIDE

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do **NOT** place your solar panel in shaded areas.

Do **NOT** charge behind glass

Thank you for choosing the Lakeside Solar Mini Post Lights (set of 2). Please read these instructions carefully before using your lights.

Important notes

Always take care when installing your lights. If you are at all unsure, please contact your retailer or a professional trades person for advice. Always take care when setting up your post lights if the ground is particularly hard. We would recommend watering the ground a little and allowing it to soak in to make it easier to install the spike.

Installation information

Remove all packaging and put to one side. Please carefully consider where you wish to install your lights before making alterations to your property. It's particularly important that the solar panel receives as much sunlight as possible. Ensure that it is not obstructed by buildings, fences, trees, sheds, etc, or the shadows that these create. If the solar panel is installed in a poor location, it may not perform to the best of its ability.

To maximise the battery capacity, the lights should be charged in direct sunlight for at least 8 hours, where possible, before being used for the first time. Failure to do so can shorten the battery life or performance of the lights.

The lights will turn ON/OFF automatically when left in the "ON" position. Please note it is completely normal for the lights to come on at different times as it depends on how fast they charge in its current location.

Installing the Light

- A- Solar Panel
- B- ON/OFF switch
- C- Transparent Lampshade
- D- Connecting Rod
- E- Ground Spike

Automatic Power-saving

This light features intelligent powersaving mode and will reduce the brightness levels of the light over the duration of the night to extend the performance until the battery has reached less than 35% power, then it will automatically turn off.

Troubleshooting

Please ensure that there are no nearby light sources shining on the solar panel after dark. These could be bright indoor/outdoor lights from your property or neighbours, or street lights.

If you are unsure, take the light inside and test it in a dark room indoors.

If you are encountering any problems with your light often you can resolve this yourself by following our troubleshooting guide. If the light has its solar panel in a poor location it will struggle to work, but that doesn't mean there is a fault with the unit. Please remember that the light will arrive with some charge and will likely work for a few days even if the solar panel is poorly located. Please try the troubleshooting tips below before contacting your retailer.

Recharge Procedure

1. Double check the location of your solar panel to ensure it is in a clear location and as South-facing as possible.
2. Turn the light off at the switch and leave it to recharge for 3-5 days ensuring at least one sunny day has passed.
3. After 3-5 days outside, return to the light and turn it back on at the switch.
4. If your light still does not illuminate after dark, please contact your retailer.

Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solution as these may damage surfaces and impair operation. Keep the solar panel free of dirt, debris, and snow.

Safety Instructions

The Solar Centre assures no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe these instructions.

Unauthorized conversion and/or modification of the unit may be dangerous and will invalidate your warranty. To avoid damage to sight, do not look directly at the light source. This device is not a toy and should be kept out of reach of children. Do not submerge the device in water or expose it to extreme temperatures (less than -25°C or higher than 50°C).
