

# TYVEK

## SOLAR GARDEN LANTERN

# USER GUIDE

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do NOT place your solar panel in shaded areas.

Do NOT charge behind glass

**Thank you for choosing the Tyvek Solar Garden Lantern. Please read these instructions carefully before using your light.**

### Important notes

Always take care when installing your light. If you are at all unsure, please contact your retailer or a professional trades person for advice.

### Installation

Remove all packaging and put to one side. Please carefully consider where you wish to install your light before making alterations to your property. It's particularly important that the solar panel receives as much sunlight as possible. Ensure that it is not obstructed by buildings, fences, trees, sheds, etc. or the shadows that these can create. If the solar panel is installed in a poor location, it may not perform to the best of its ability.

To maximise the battery capacity, the lights should be charged in direct sunlight for 3-5 days before being used for the first time.

The lights will turn ON/OFF automatically when left in the ON position. Please note it is completely normal for the lights to come on at different times as it depends on how fast they charge in their location.

Please note your light will not turn on if it is daylight, to test your light is working take it into a dark room, or cover the panel using an opaque cloth to block out any light.

### Assembly

1. Take out the lantern.
2. Toggle the switch to the 'ON' position on the underside of the battery pack.
3. Insert the open ends of the expander into the two small holes in the solar panel, inside the lantern.
4. Pull the fabric to open the lantern, fit the bracket into the ears of the other side of the lantern.
5. Hang the lantern outside, in a sunny spot and it will automatically turn on when it's dark.

### Troubleshooting

Please ensure that there are no nearby light sources shining on the solar panel after dark. These could be bright indoor/outdoor lights from your property, neighbours, or street lights.

If you are unsure, take the light inside and test it in a dark room.

If you are encountering any problems with your light often you can resolve this yourself. If the light has its solar panel in a poor location, it will struggle to work, but this does not mean that there is a fault with the unit. Please remember that the light will arrive with some charge and will likely work for a few days even if the solar panel is poorly located. If your light still does not illuminate after dark, please contact your retailer.

## Maintenance

When the lantern is not in use, collapse the lantern and turn off the battery to the 'OFF' position and store in a clean, dry place. Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solutions as these may damage the surfaces and impair operation. Please keep the solar panel free of dirt, debris, and snow.

## Safety Instructions

The Solar Centre assumes no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe these instructions.

Unauthorised conversion and /or modification of the unit may be dangerous and will invalidate your warranty. To avoid damage to sight, do not look directly at the light source. This device is not a toy and should be kept out of reach of children. Do not submerge the device in water or expose it to extreme temperatures (less than -25°C or higher than 50°C).

## Battery

Warning: Each solar power compartment contains a rechargeable battery. Only adults should handle the battery. Please keep away from children. Follow the manufacturers safety and usage instructions. Insert batteries observing the proper polarity (=/-) as indicated inside the battery compartment. Failure to properly align the battery polarity can cause personal injury and/or property damage.

Never throw batteries into fire. Do not expose batteries to fire or heat sources. Battery disposal: Spent batteries must be properly disposed of and recycled in accordance to your local authorities.
